DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 4/20/06 was filed on 4/20/06. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Drawings

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: the reference number 6a is missing from Figure 7. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Art Unit: 1795

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities: the term “anode 3” on page 7, line 8 should be changed to “cathode 3”. Appropriate correction is required.

Allowable Subject Matter

5. Claims 1-12 are allowed.

The Mino reference (US 2003/0118897) discloses a method of producing a lithium microbattery comprising formation of first and second current collectors “b” & “g”, a cathode, an electrolyte comprising a lithiated compound, and an anode comprising lithium “f” on a substrate “a1”, wherein the electrolyte formation step comprises the steps: depositing the electrolyte layer on a substrate provide with a current collector and with a first active material layer, wherein the electrolyte layer is formed by photoresist coating and the dry-etching method which implies that a photoresist (mask) is fabricated by photolithography on the electrolyte layer, unnecessary portions are removed by dry-etching, and then the photoresist is removed to form the electrolyte (See paragraph [0017],[0019], [0046],[0047] and Figures 6-9).

However, Mino et al does not expressly teach the step of: depositing, on the electrolytic thin layer, a first protective thin layer that is chemically inert with regard to lithium and then a first masking thin layer.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Conclusion

6. This application is in condition for allowance except for the following formal matters: The objection to the drawings and the objection to the specification stated above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
